DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-8, 11-13, 16--24, are rejected under 35 U.S.C. 102(e) as being anticipated by Sahai et al.(US Publication 2002/0076010 A1).

Regarding claims 1, 12, 17, Sahai teaches an apparatus/method for delivering a voice mail message to a recipient, comprising:

a memory (0026, 0048); and

at least one processor, coupled to the memory, operative to (0047):

receive said voice mail message from a sender (0026);

obtain a presence status of said sender from a presence server (0028); and

deliver said voice mail message to said recipient to automatically respond to the sender an indication of a presence of said sender (0028).

Art Unit: 2686

Regarding claims 2, 18, Sahai teaches a method/apparatus wherein said presence server extracts presence information from a plurality of presence data stores (00031-0032).

Regarding claims 3, 19, Sahai teaches a method/apparatus of claim 2, wherein said presence server translates said presence information to a standard format (0039).

Regarding claims 4, 20, Sahai teaches a method/apparatus wherein said presence server determines said presence status of said sender based on one or more rules that aggregate extracted presence information (0032).

Regarding claims 5, 21, Sahai teaches a method/apparatus wherein said recipient responds to said sender in another domain (0032).

Regarding claims 6, 22, Sahai teaches a method/apparatus wherein said presence information indicates if the message sender can be reached at one or more indicated devices (0032).

Regarding claims 7, Sahai teaches a method of claim 1, wherein said presence information is obtained from a user registration process (0027).

Art Unit: 2686

Regarding claims 8, Sahai teaches a method of claim 1, wherein said presence information is obtained by observing activities of a user (0032-0033).

Regarding claims 11, 16, 23, Sahai teaches a method/apparatus wherein said recipient can respond to said sender using a non-textual form of communication (0031).

Regarding claim 13, Sahai teaches a method of claim 12, wherein said providing step allows said recipient to respond to said sender in another domain (0031-0032).

Regarding claim 24, Sahai teaches an apparatus of claim 17, wherein said presence status indicates a presence status of said sender across a plurality of domains (0032-0033).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 9-10, 14-15, are rejected under 35 U.S.C. 103(a) as being unpatentable over Sahai (US Publication 2002/0076010) in view of Haim (US Patent 6,718,014)

Regarding claims 9, 14, Sahai fails to teach a method/apparatus wherein said recipient can respond to said sender in real time. However, Haim teaches a method/apparatus wherein said recipient can respond to said sender in real time (col 4 lines 5-15, col 1 lines 8-14). Therefore, it would have been obvious to ordinary skill in the art at the time the invention was made to combine the above teaching of Haim with Sahai, in order to notify the user of the incoming telephone call in response to the telecommunication interface intercepting the incoming telephone call prior to ringing of the incoming telephone call.

Regarding claims 10, 15, Sahai fails to teach a method wherein said recipient can respond to said sender in non-real time. Haim teaches a method wherein said recipient can respond to said sender in non-real time (col 1 lines 8-14, col 4 lines 5-15). Therefore, it would have been obvious to ordinary skill in the art at the time the invention was made to combine the above teaching of Haim with Sahai, in order to notify the user of the incoming telephone call in response to the telecommunication interface intercepting the incoming telephone call prior to ringing of the incoming telephone call.

Response to Arguments

4. Applicant's arguments with respect to claims 1-24 have been considered but are moot in view of the new ground(s) of rejection.
